Genes that have no significant protein similarity are described as 'unknown protein'. The software programs used to predict genes include: Grail (Informatics Group, Oak Ridge National Laboratory, http://compbio.ornl.gov/Grail-1.3/), GENSCAN (Chris Burge, MIT, http://CCR-081.mit.edu/GENSCAN.html), GENSCAN (Chris Burge, MIT, http://CCR-081.mit.edu/GENSCAN.html), NetGene2 (S.M. Hebsgaard, et al., CBS, Technical University of Denmark, http://www.cbs.dtu.dk/services/NetGene2/) and SplicePredictor (Volker Brendel, Stanford University, http://gremlinl.zool.iastate.edu/cgi.bin/sp.cgi.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Genes encoding tRNAs are predicted by tRNAscan-SE (Sean Eddy, Washington University School of Medicine, http://genome.wustl.edu/eddy/tRNAscan-SE/)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This sequence may not be the entire insert of this clone.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    shorter because we remove overlaps between neighboring submissions.

Submitted (09-MAR-2000) The Institute for Genomic Research, 9712 Medical Center Dr., Rockville, MD 20850, USA on Dec 17, 1999 this sequence version replaced gi:4544435. The sequence and annotation of chromosome 2 were merged from those of the individual clones on this chromosome after removing overlaps. For detailed information, please see the TIGR web site (http://www.tigr.org/tdb/at/at.html).
```

COMMENT

JOURNAL

Genes were identified by a combination of three methods: Gene prediction programs including GRAIL (ftp://arthur.epm.ornl.gov/pub/xgrail), Genefinder (Phil Green, University of Washington), Genscan (Chris Burge, http://gnomic.stanford.edu/GENSCANW.html), and NetPlantGene (http://www.cbs.dtu.dk/services/NetGene2/), searches of the complete sequence against a peptide database and plant EST databases at TIGR, and manual curations based on those analyses. Annotated genes are named to indicate the level of evidence for their annotation. Genes with similarity to other proteins are named after the database hits. Genes without significant peptide similarity but with EST similarity are named as 'unknown' proteins. Genes without protein or EST similarity, that are predicted by two annotated as 'hypothetical' proteins. Genes encoding tRNAs are predicted by tRNAscan-SE (Sean Edy), http://genome.wustl.edu/eddy/tRNAscan-SE/). Simple repeats were identified by repeatmasker (Arian Smit, http://ftp.genome.washington.edu/RM/RepeatMasker.html). Genes are numbered from the top to bottom of the chromosome.

We thank the CSHL/WashU/ABI consortium for sequencing BAC clones F6P23, F5J6, 717A5, and T13L16, the ESSA group for sequencing clone F13D4, and Scott Jackson, Jiming Jiang, Klaus Meyer, Eric Richards and Satoshi Tabata for helpful assistance. In addition, we would like to thank the TIGR Bioinformatics Department, especially Lixin Zhou, Hanif Khalak, Michael E. Heaney, Lily Fu, Feng Liang, Jeremy Peterson, Michael Holmes, and Delwood Richardson for software and database support.

This work was supported by the National Science Foundation Department of Energy and the US Department of Agriculture.

                                                                                                    The DNA sequence, vectors containing it, protein encoded by it, or antibodies recognising the protein can be used for modulating plant cell cycle, plant cell division and/or growth, for influencing the activity of mitogenic cyclin in a plant cell, as positive or negative regulator of cell proliferation, for modifying the growth inhibition caused by environmental stress conditions, or for use in a screening method for the identification of inhibitors or activators of cell cycle proteins. A compound which is an activator or inhibitor of the mitogenic cyclin can be used as a growth regulator and/or herbicide. The proteins can also be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   growth regulator; herbicide; cell division progression; ds

                                                                                 This sequence represents the CYCD2;1 cDNA from Nicotiana tabacum which encodes a D-type cyclin. The sequence can be used to alter the growth encodes a D-type cyclin. The sequence can be used to alter the growth characteristics or architecture of plants by altering the (functional) characteristics or architecture of plants by altering the (functional) level in the plant cells of a cell-division controlling protein that can level in the plant cells of a cell-division controlling protein that can be composed by the protein of the cyclin gene is used to increase or decrease the growth modulation of the cyclin gene is used to increase not decrease the rate, provide faster germination, reduce time to flowering, increase the raduce height and to delay flowering in a range of plants, e.g. legumes, grasses, maize, oliseed rape, wheat, tomato, rice, barley, sunflower, caracteristics and controlled the cyclin 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           WO9842851-A1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Nicotiana tabacum.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Regulating growth and structure of plants by modulating protein that controls cell division - specifically a D-type cyclin, and related chimeric genes and transformed cells and plants, used to alter growth rate, flowering, seed production etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              01-OCT-1998.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               215
```

This sequence represents the CYCD1:1 cDNA from Zea mays which encodes a D-type cyclin. The sequence can be used to alter the growth characteristics or architecture of plants by altering the (functional) level in the plant cells of a cell-division controlling protein that can bind to, or phosphorylate, an Rb-like protein, such as a D-type cyclin. Modulation of the cyclin gene is used to increase or decrease the growth rate, provide faster germination, reduce time to flowering, increase the number of flowers, sedds or fruits per plant, increase root development, reduce height and to delay flowering in a range of plants, e.g. legumes, grasses, maize, oilseed rape, wheat, tomato, rice, barley, sunflower,

growth rate, flowering,

WPI; 1998-532012/45.

Claim 14; p64-65; 75pp; English.

Regulating growth and structure of plants by modulating protein that controls cell division - specifically a D-type cyclin, and related chimeric genes and transformed cells and plants, used to alter

seed production etc.
